Sustainable Lighting At Litecontrol

Industry Insight
Litecontrol, founded in 1936, is a leader in the design, development, manufacture, and marketing of innovative, high quality architectural lighting systems. Primary markets for the company's products include office buildings, schools, hospitals, laboratories, libraries, and stores throughout North America.

Purpose

At Litecontrol, we understand what it means to be a good neighbor. Our factories are located in rural communities in Massachusetts, amidst the homes and cranberry bogs of our neighbors. Decades ago, this made us aware that we must take responsibility for the impacts of our actions on the world around us. Coupled with our employee-ownership, this awareness means that we take a broad view of what constitutes a quality product and a quality lighting manufacturer. Our products and our performance reflect our commitment to the purposes of sustainable lighting.

Products

Litecontrol's products are among the most efficient fixtures in the industry. We make use of the latest in lamps, ballasts, and materials to optimize our designs. Since our primary market segments (schools, offices, health care, retail) are those where lighting has been a large contributor to electricity use, we are purposeful in providing our customers with solutions that can reduce that consumption. This includes providing opportunities for integrating automatic control systems with our fixtures, further enabling our customers to meet sustainable design goals.

Performance

In our factories, we eliminated all water discharges from our various rinsing operations, recycling the rinse water instead. We installed two powder-coat paint lines that produce no VOC emissions or hazardous waste, and we upgraded our wet-paint facility to reduce energy consumption and VOC emissions. All of our trimmed or unused steel and aluminum is recycled, as are all of the containers and packaging materials from the components for our fixtures. Many of our fixture housings and parts are produced from recycled steel and aluminum, and are fully recyclable when removed from an installation. And we have upgraded our own facilities to reduce our energy use.

Sustainable lighting is a combination of purposeful concern for your environment, the products you put into commerce and the way your products and factories perform. At Litecontrol our Purpose, Products, and Performance support sustainable lighting.
