

Offices

Office lighting today demands solutions that deliver the light levels needed in a highly efficient way, while providing glare- and shadow-free environments. The office environment balances the need for efficiency and productivity with the need for pleasant and comfortable work spaces.

Litecontrol's pendant-mounted fixture families provide many opportunities to balance the efficiency of direct lighting with the qualitative benefits of indirect lighting. We have decades of experience with our popular perimeter and cove systems, allowing the design team to cleanly integrate the lighting into the architecture and provide office workers with pleasant, spacious environments. And when recessed lighting is called for, our Mod and SAE families can meet the need.

Regardless of the type of lighting selected, you can be sure you are minimizing your impact on the environment with Litecontrol. Our Cradle to Cradle Certified fixtures provide the assurance that you are satisfying your energy-efficient design goals with products from a manufacturer with a demonstrated commitment to minimizing our impact on the natural world. The following pages provide an overview of our lighting solutions for offices.

Arcos Perf II DePM Inc., Interior Design Firm
Toronto, Canada
